1. T/F: A low therapeutic index is indicative of a very safe drug.
2. A drug that blocks synaptic release is
   a) an agonist
   b) an antagonist
   c) an inhibitory post synaptic potential
   d) an excitatory post synaptic potential
3. Give two routes of administration (besides oral and intravenous) see textbook p78-79
4. T/F: Sensitization refers to a decrease of the effect of a drug after prolonged use.

1. T/F: Tolerance refers to an increase of the effect of a drug after prolonged use.
2. A drug that blocks a metabotropic receptor is
   a) an agonist
   b) an antagonist
   c) an inhibitory post synaptic potential
   d) an excitatory post synaptic potential
3. Give two routes of administration (besides oral and intravenous) see textbook p78-79
4. T/F: Exitotoxicity occurs when the margin of safety is low.
